

# Rubber Kerbing

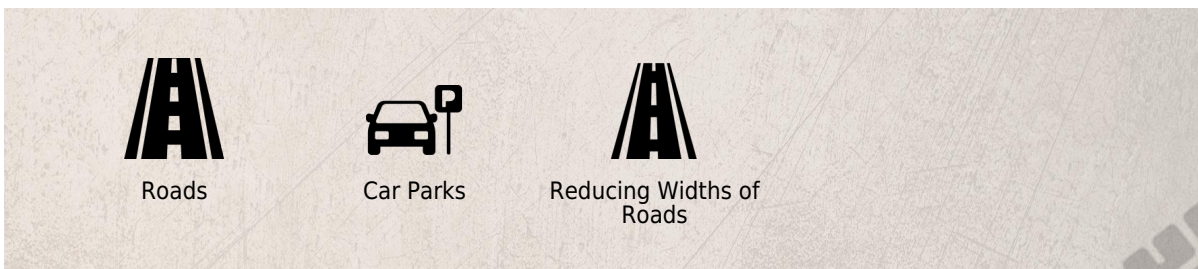

**Rubber Kerbing does not crack, chip or breakaway. Rubber kerbing is cost effective and very quick to install. It can be used in many applications, providing median term traffic management and can also be removed if required for annual street parades, cycle races and car races.**

Saferoads Rubber Kerbing is available in two popular profiles, the Semi Barrier, and Semi Mountable. It is manufactured with white EPDM rubber. Unlike concrete kerbing, rubber kerbing is resistant to greying from road grime over time and does not require constant maintenance to maintain its visibility. Product is custom designed to suit your needs, so call Saferoads today for a free consultation with our experienced solution managers.
