

Blockout Barriers

Designed to redirect foot traffic and protect pedestrians from hazards on the footpath or walkway, Saferoads' Blockout pedestrian barriers are economical to transport and easy to install - coming in at only 18kg when empty, they can be stacked in the back of trucks or trays and filled with 250L of water once they reach their destination.

The Blockout Pedestrian Water Filled Barrier is a lightweight and easy to transport and install.

Once interlocked and filled with water on site, they are a maintenance free, sturdy barrier system.

The Blockout Pedestrian Water Barrier is a popular safety barrier, used as a delineation device for pedestrian/vehicle separation at sporting venues, events, festivals, carnivals and construction sites.

- ✓ Available colours – red and white
- ✓ Each join allows for over 240 degree angling
- ✓ Stackable
- ✓ Interlocking tabs
- ✓ Delineation device for pedestrian/vehicle separation
