

Rubber Kerbing

Rubber Kerbing does not crack, chip or breakaway. It is cost effective and very quick to install. It can be used in many applications, providing medium to long term traffic management and can also be removed if required for annual street parades, cycle races and car races.

Rubber Kerbing is available in two popular profiles, the Semi Barrier, and Semi Mountable. It is manufactured with white EPDM rubber. Unlike concrete kerbing, rubber kerbing is resistant to greying from road grime over time and does not require constant maintenance to maintain its visibility.

- ✓ Absorbs vehicle impacts
