

Rumble Bars

Rumble Bars are surface mounted units that provide a visual and audible warning to deter motorists from certain areas or hazardous conditions. Suitable for centre line, median, edge marking and line marking traffic islands, our rumble strip is easily installed and will not crack, chip or break like concrete.

Rumble Bars are partially constructed from recycled rubber, making the units heavy duty and long wearing. They are built to last the most demanding traffic conditions. The rumble strip contours to the road surface, and can be glued or screwed in place.
